MARCOS ANTONIO AVILA MORALES

FULL STACK DEVELOPER

+53 55417357 • marcos.seocuba@gmail.com • https://github.com/markospy • Cienfuegos, Cuba

PROFESSIONAL PROFILE

Full Stack Developer with 3+ years designing and evolving production applications, specialized in FastAPI backend and React frontend. Successfully built and scaled MVPs like Fitlink, serving 30 gyms and 29,000 users. Skilled in Clean Architecture migration, automated workflows, and LLM integrations for business intelligence. Combines pragmatic development speed with architectural rigor to deliver impactful, domain-driven solutions aligned with business goals.

EXPERIENCE

Coan Dominicana

Santo Domigo, Dominicana

Full Stack Developer

01/2025 - Now

Development and maintenance of applications for a company specialized in the sale and installation of security systems.

- Development, maintenance, and technical leadership of a comprehensive gym management platform (Fitlink), initially built as a sole developer.
- Design and delivery of a functional MVP within 4 months, enabling the company to begin customer acquisition at an early stage.
- Progressive scaling of the system to support 30+ active gyms and approximately 29,000 registered customers.
- Onboarding and collaboration with a second developer starting in the seventh month, actively contributing to code organization and technical decision-making.
- The project initially adopted a classic layered architecture, prioritizing development speed and early product validation.
- As the application grew and new requirements emerged, a gradual migration toward Clean Architecture was initiated while keeping the system in production.
- This process improved separation of concerns, testability, and scalability without disrupting active customer operations.
- Direct involvement in architectural decision-making, refactoring of critical modules, and adapting the codebase to an evolving business domain.
- Ongoing development of a comment scraping application for Instagram posts focused on sentiment analysis.
- Implementation of LLM integrations using RAGs and intelligent agents, aimed at generating strategic insights for businesses and political stakeholders.
- The application was designed from the ground up using Clean Architecture, ensuring a clear separation between domain, use cases, and infrastructure.
- Architecture oriented toward seamless integration with large language models (LLMs), including RAGs and agents, enabling extensibility and easy replacement of external components.
- Strong focus on maintainability, scalability, and long-term product evolution, given its use in strategic data analysis within business and political contexts.
- Primary technology stack: FastAPI, React, React Router, and PostgreSQL.
- The scraping application uses Nuxt.js for the frontend.

EXPERIENCE

SaaS Application for Barbershop Management

Personal Project

Full Stack Developer

11/2025 - Now

Design and development of a barbershop management application.

- Design and development of a SaaS platform for comprehensive barbershop management, focused on operational automation and improved customer experience.
- Implementation of automated appointment management through chatbot-enhanced conversational flows, reducing operational workload and optimizing barbers' time.
- Integration with WhatsApp, enabling customers to check availability, schedules, offered services, products, pricing, and active promotions.
- Development of a sales tracking module for services and products, along with an expense management module, allowing businesses to maintain detailed financial control and make data-driven decisions.
- Project conceived and executed with a product-driven and entrepreneurial mindset, generating active interest from multiple barbers prior to the official launch.
- Implementation of a layered architecture organized into schemas, models, repositories, routes, and a core layer.
- Pragmatic approach balancing best practices and development speed, well suited for an early-stage SaaS product.
- Design focused on enabling future refactoring or architectural migrations as the product validates market fit and grows in complexity.
- Primary technology stack: FastAPI, Vue, Nuxt.js, n8n, PostgreSQL.
- Estimated launch date: January 2026.

Freelance Developer at MQL5.com

Freelancer

Trading Bot Developer (MQL4 / MQL5)

10/2022 - 08/2024

Development of trading bots.

- Development of 20+ automated trading bots for MetaTrader 4 and MetaTrader 5, tailored to different market strategies.
- Implementation of custom algorithmic logic based on individual client requirements, adapting entry, exit, and risk management rules.
- Continuous collaboration with international clients, strengthening technical communication skills, requirements gathering, and expectation validation.
- Strong experience in time management and delivery under pressure, meeting tight deadlines without compromising code quality.
- Further development of logical thinking, problem-solving skills, and development discipline, applicable to larger-scale software projects.

STRENGTHS

Strong and Versatile Full Stack Experience

Over **1 year of experience** developing applications in production environments.

Strong command of **FastAPI** (backend) and **React with React Router** (frontend).

Experience working with **PostgreSQL databases** and managing complex data models.

Architectural Design and Evolution

Ability to choose the **appropriate architecture** based on project requirements:

- Classic layered architecture for rapid MVP development.
- Migration to **Clean Architecture** in growing projects.
- Pragmatic use of layered architectures in SaaS projects to balance best practices and development speed.

Experience in **refactoring and maintaining production systems**, with a focus on scalability and testability.

Product and Business Orientation

Software development driven by **business vision**, not just code:

- **Fitlink**: MVP delivered in 4 months, 30+ gyms, ~29,000 customers.
- **Barbershop SaaS**: appointment and sales automation, chatbot and WhatsApp integration.
- **Scraping platform**: sentiment analysis for strategic decision-making.

Ability to **align technology with business needs** and deliver measurable impact.

STRENGTHS

Entrepreneurial Mindset and Autonomy

Experience leading projects **as a sole developer**, from inception to MVP and early growth.

Proactive approach to designing **scalable solutions and complex systems** with minimal supervision.

Freelance experience working directly with clients, managing requirements and deliveries.

Complementary Soft Skills

Effective communication with clients and team members to gather requirements and validate expectations.

Critical thinking applied to **architecture, design, and technology selection**.

High adaptability and fast learning of new tools and paradigms.
